Informatics Engineering undergraduate passionate about web development, especially backend and database management. Quick learner with a strong interest in programming and design, continuously seeking to grow in the tech field.

EDUCATION

Universitas Kristen Satya Wacana 2022 - Present

Bachelor's Degree in Informatics Engineering (Expected 2027)

EXPERIENCES

1. Internship - PT Midi Utama Indonesia Tbk. (Alfamidi) Tangerang Selatan, Sep 2025 - Sep 2026
   - Internship in the IT business solutions division. Assisting employees in managing websites and applications used to support the company's development.

2. Personal Projects 2022 - Present
   - Developed a dynamic company website using Flask (Python) and MongoDB, and deployed it on Google Cloud Platform (GCP) with a focus on clean architecture, scalability, and secure deployment.
   - Built RESTful APIs and integrated frontend interfaces with backend services.
   - Deployment production-ready applications to Railway(Backend), Vercel(Frontend), Supabase(Database).
   - Focused on clean architecture, scalability, and secure deployment practices.
   - Design and managed database using MySQL, PostgreSQL, and MongoDB.

PROJECT

- **Landing Page Profile (**https://cessachristian.me**)** - 2026 - Built a static-friendly cafe landing page using Next.js (App Router), TypeScript, Tailwind, shadcn/ui, Framer Motion, and GSAP for interactive hero animations.
- **Alfamidi Project Management System (PMS)** - 2026 - I developed a web-based Project Management System using Python Flask and PostgreSQL for Alfamidi's IT Division. The system manages the end-to-end Service Request lifecycle with a database-driven approval workflow, role-based access control, PIC assignment and task tracking, monitoring dashboards with Excel export, and automated email notifications. The goal was to replace manual spreadsheet tracking so every IT project request could be monitored and audited in one centralized platform.
- **Teras Inn POS System (**https://github.com/CessaChristian/kasir_app.git**)** - 2026 - I developed a fully offline Point of Sale mobile app using Flutter for a local F&B business. The app includes multi-role access (Owner & Cashier), shift management, sales reporting, inventory tracking, and expense recording. The goal was to build a professional, easy-to-use cashier system that works without internet so small business owners can manage daily operations entirely from their phone.

TECHNICAL SKILLS

- Programming Languages: Go, Python, JavaScript, PHP, Java, C/C++
- Frontend: HTML, CSS, React.js, Next.js, Tailwind CSS
- Backend: Flask, Echo(Go), FastAPI, Laravel
- Mobile: Flutter, Kotlin, Java
- Database: PostgreSQL, MySQL, MongoDB
- Tools: Git, Figma, Google Cloud Platform, Supabase, Railway, Vercel
